ISMARCO STORY

Since the dawn of history,

Stone has been the silent language of the Earth.

With it, humankind carved its earliest thoughts upon the rocks

And from the heart of the mountains, raised the pillars of civilization.

In Persia, the artisans of the Achaemenid Empire shaped **limestone**
into palaces whose perfect geometry reflected the **wisdom of Iran**.

In Athens, the magical **Pentelic marble** gleamed beneath the Greek sun,
becoming temples that elevated beauty to a divine realm.

In Machu Picchu, high in the Andes,

stones were laid without mortar —

not to dominate nature, but to live within its embrace.

From the Pyramids of Egypt to the Colosseum of Rome,
from the Great Wall of China to Persepolis,
stone has always carried a single timeless message:
Eternity, balance, and the bond between humankind and the Earth.
And today, in the heart of Iran —
where mountains and culture meet —
This ancient legacy is reborn.
ISMARCO continues that eternal dialogue —
between nature and intellect, East and West, past and future.
At ISMARCO, we **reimagine the spirit of Iranian stone**
through the language of contemporary design;
we carve the beauty of nature into modern forms,
and give new meaning to the heritage of civilizations
for today's world — and for generations to come.

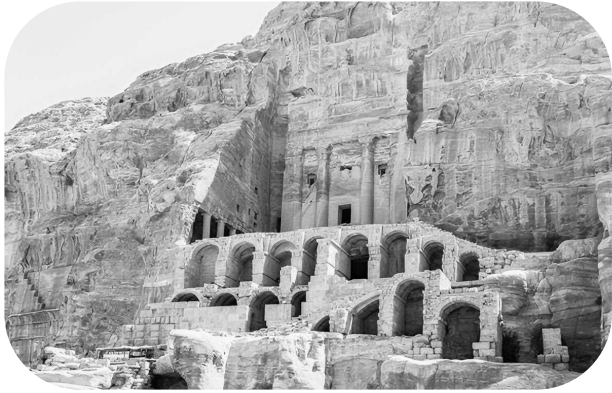

Stone, The Enduring Language of Civilizations

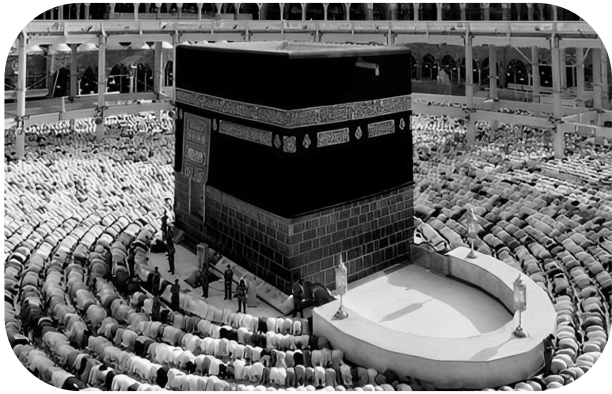

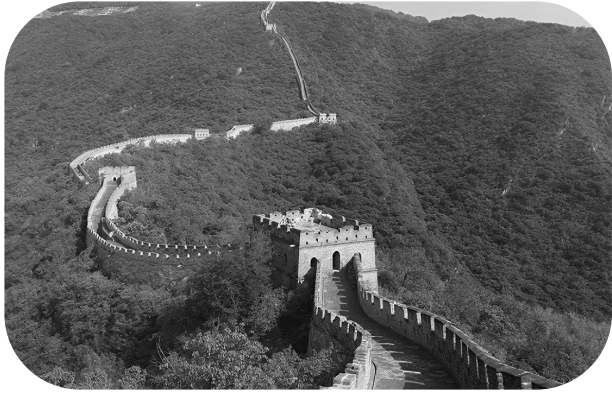

At ISMARCO, we see stone not as a raw material but as a living language, a language that speaks of beauty, authenticity, and humanity's bond with the earth.

Our mission is to reawaken the spirit of Iranian stone through contemporary design, crafting each piece as a bridge between history and the future, art and function, earth and mind.

Stone, The Timeless Dialogue of Civilizations

ISMARCO envisions becoming a timeless dialogue between civilizations, where stone becomes the universal language of art, nature, and culture. Our vision is to create a world where Iranian stone is not merely a building material but a source of inspiration for design and human imagination.

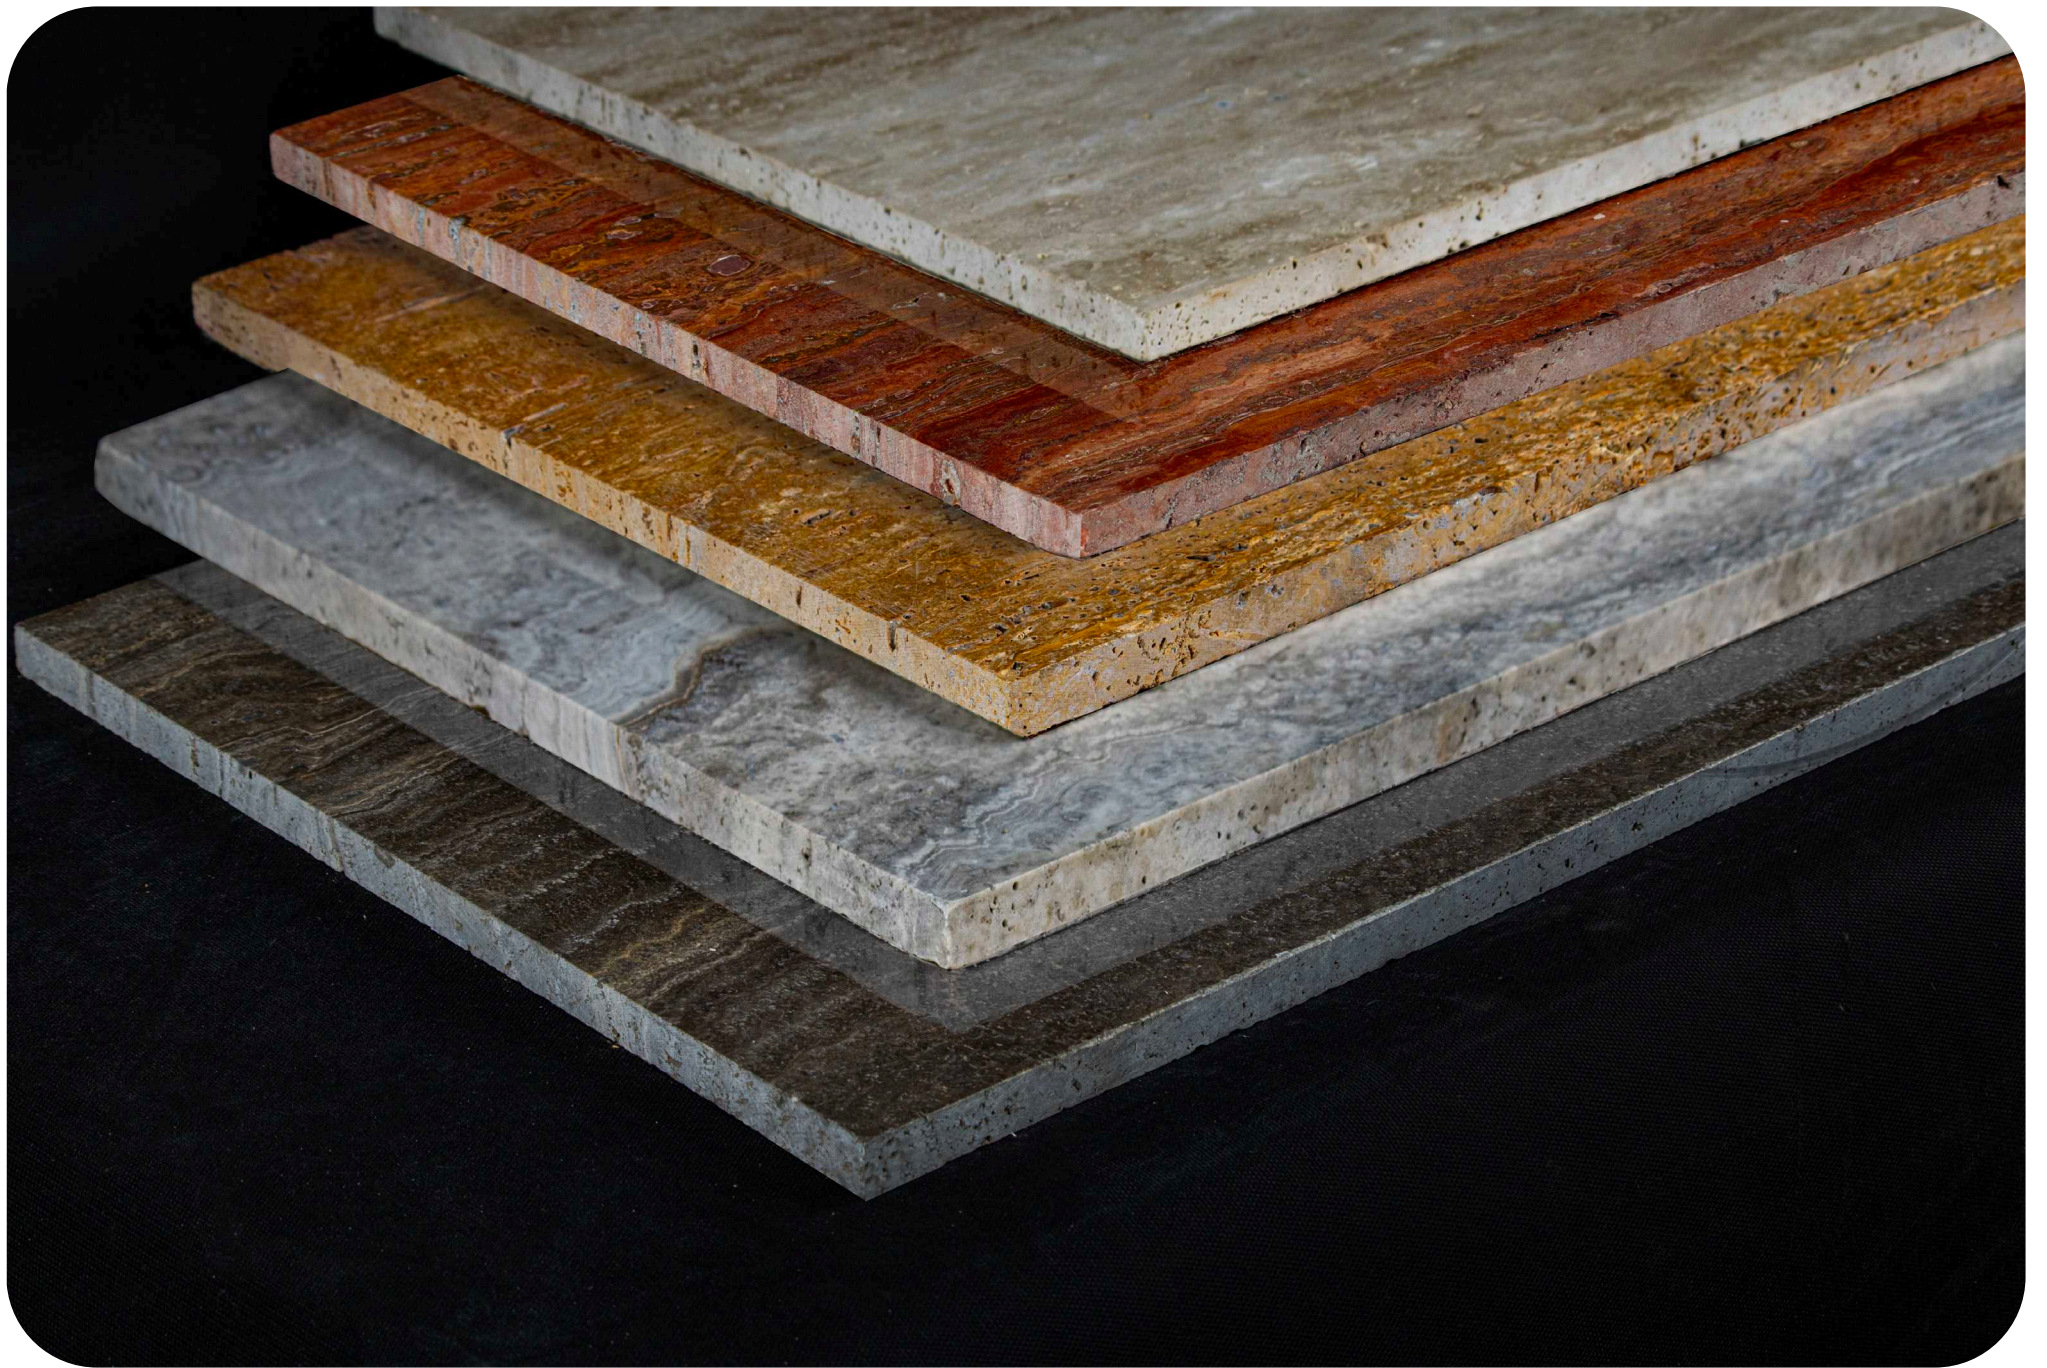

Travertine, The Timeless Art of Architectural Beauty

ISMARCO travertine products are produced using advanced stone-processing technology and specialized expertise. Precision cutting, consistent finishing quality, and reliable supply are among the key characteristics that make our stones a trusted choice for architectural projects. Selected travertine **blocks** are first cut into **large slabs** and then precisely sized using modern machinery into (**Cut-to-size Tiles**). These stones are available in **different thicknesses** to suit a wide range of architectural and construction applications.

Our travertine is offered in three surface finishes: **Brushed**, **Honed**, and **Polished**, and in both **Filled** and **Unfilled** options. The stones are produced using both **Cross-Cut** and **Vein-Cut** techniques, with the possibility of **Vein-Match** installation to create continuous and harmonious natural patterns in architectural designs.

ISMARCO travertine is suitable for both interior and exterior applications, including flooring, wall cladding, and various architectural elements, providing a timeless natural aesthetic combined with reliable quality.

Filled Honed

The image shows a close-up of a white travertine stone surface. The texture is characterized by a light beige or off-white base color, with prominent, irregular, vertical veins of a slightly darker, warm tan or light brown hue. The surface has a natural, porous appearance with subtle variations in tone and texture, typical of travertine. The overall effect is clean, bright, and organic.

Marble, The Classic Essence of Natural Elegance

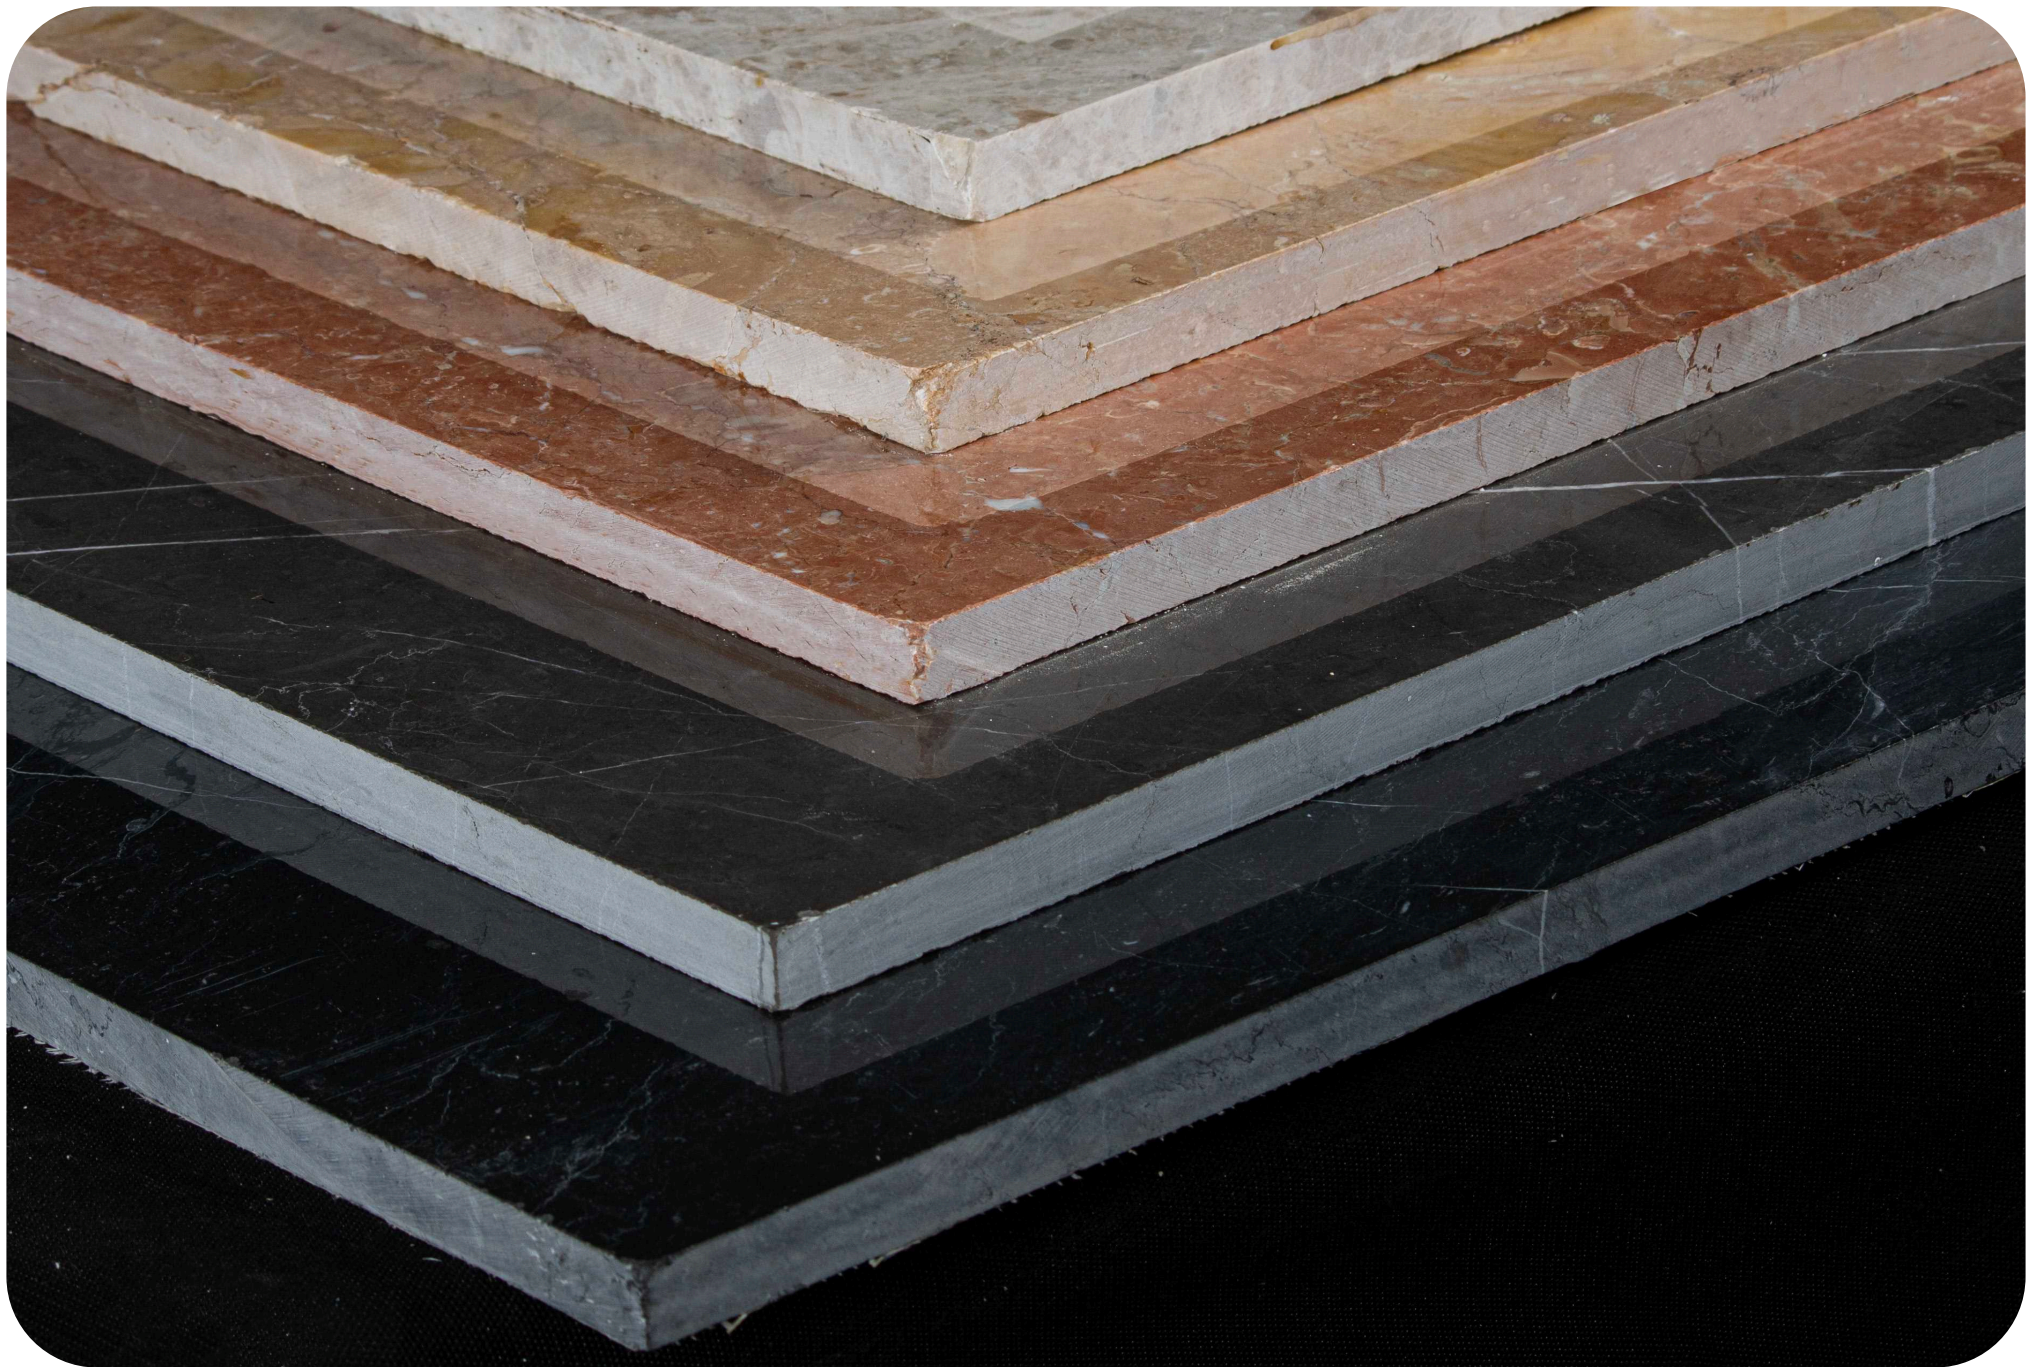

ISMARCO marble products are manufactured using advanced processing technology and professional craftsmanship, ensuring precise sizing, consistent surface quality, and reliable supply for architectural applications. Carefully selected marble blocks are processed into large slabs and then accurately cut to size using modern machinery, delivering high-quality cut-to-size tiles suitable for a wide range of interior architectural uses.

ISMARCO marble is offered in six surface finishes: Sandblasted, Brushed Sandblasted, Brushed Bush-Hammered, Brushed, Honed, and Polished.

Due to the natural properties of marble, Polished and Honed finishes are not recommended for exterior applications, while Sandblasted, Brushed Sandblasted, Brushed Bush-Hammered, and Brushed finishes provide the durability, slip-resistance, and surface texture required for outdoor environments. For interior spaces, all finishes—including Polished and Honed—perform effectively depending on the design intent and functional requirements.

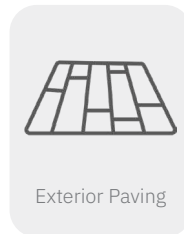

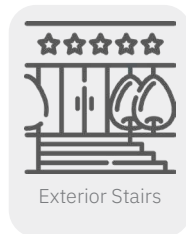

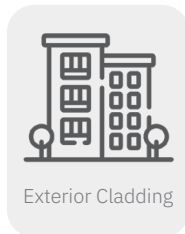

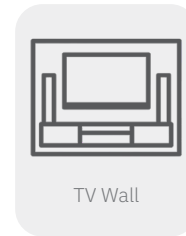

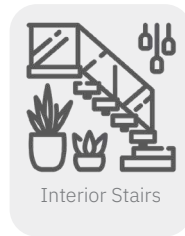

While marble offers timeless beauty and elegance, it is naturally more sensitive to staining and etching, which makes it less suitable for kitchen countertops. However, it performs exceptionally well in vanities, wall cladding, interior flooring, and decorative architectural elements.

Combining refined aesthetics with precision craftsmanship, ISMARCO marble provides architects and designers with a versatile range of finishes and formats, delivering both classic luxury and long-lasting performance across interior spaces and selected exterior applications.

Granite, The Enduring Strength of Natural Beauty

ISMARCO granite products are manufactured using advanced processing technology and precise engineering, ensuring accurate sizing, consistent surface quality, and reliable long-term performance for architectural applications. Carefully selected granite blocks are processed into large slabs and then cut to size using modern machinery, delivering high-strength tiles suitable for demanding interior and exterior uses.

Granite is exceptionally durable, offering superior resistance to abrasion, impact, moisture, and temperature changes. These properties make it a highly suitable material for high-traffic areas, where long-lasting performance and structural reliability are essential.

According to industry standards, polished granite is ideal for kitchen countertops due to its low porosity, high scratch-resistance, and excellent heat tolerance. However, because granite naturally contains trace heavy minerals, it is generally not recommended for large residential living areas where extended human occupancy occurs, such as main living rooms. For exterior and semi-exposed applications—including parking floors, ramps, driveways, and outdoor circulation zones—granite performs exceptionally well when finished with non-slip surface textures, offering excellent grip and durability even under heavy load conditions.

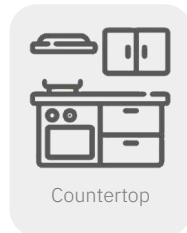

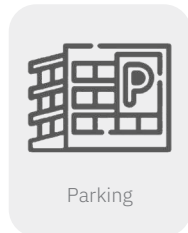

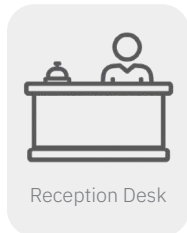

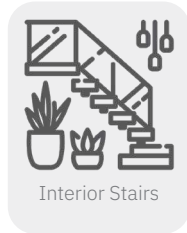

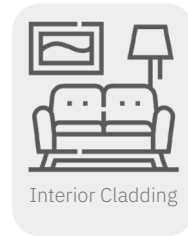

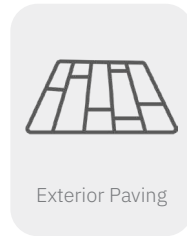

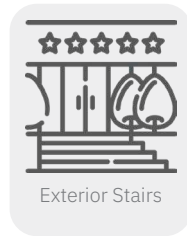

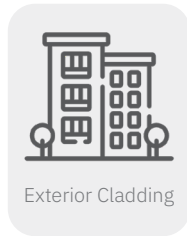

Granite also excels in interior flooring, staircases (indoor and outdoor), wall cladding, commercial lobbies, service areas, and high-wear public spaces, providing a combination of strength, stability, and long-lasting aesthetic value.

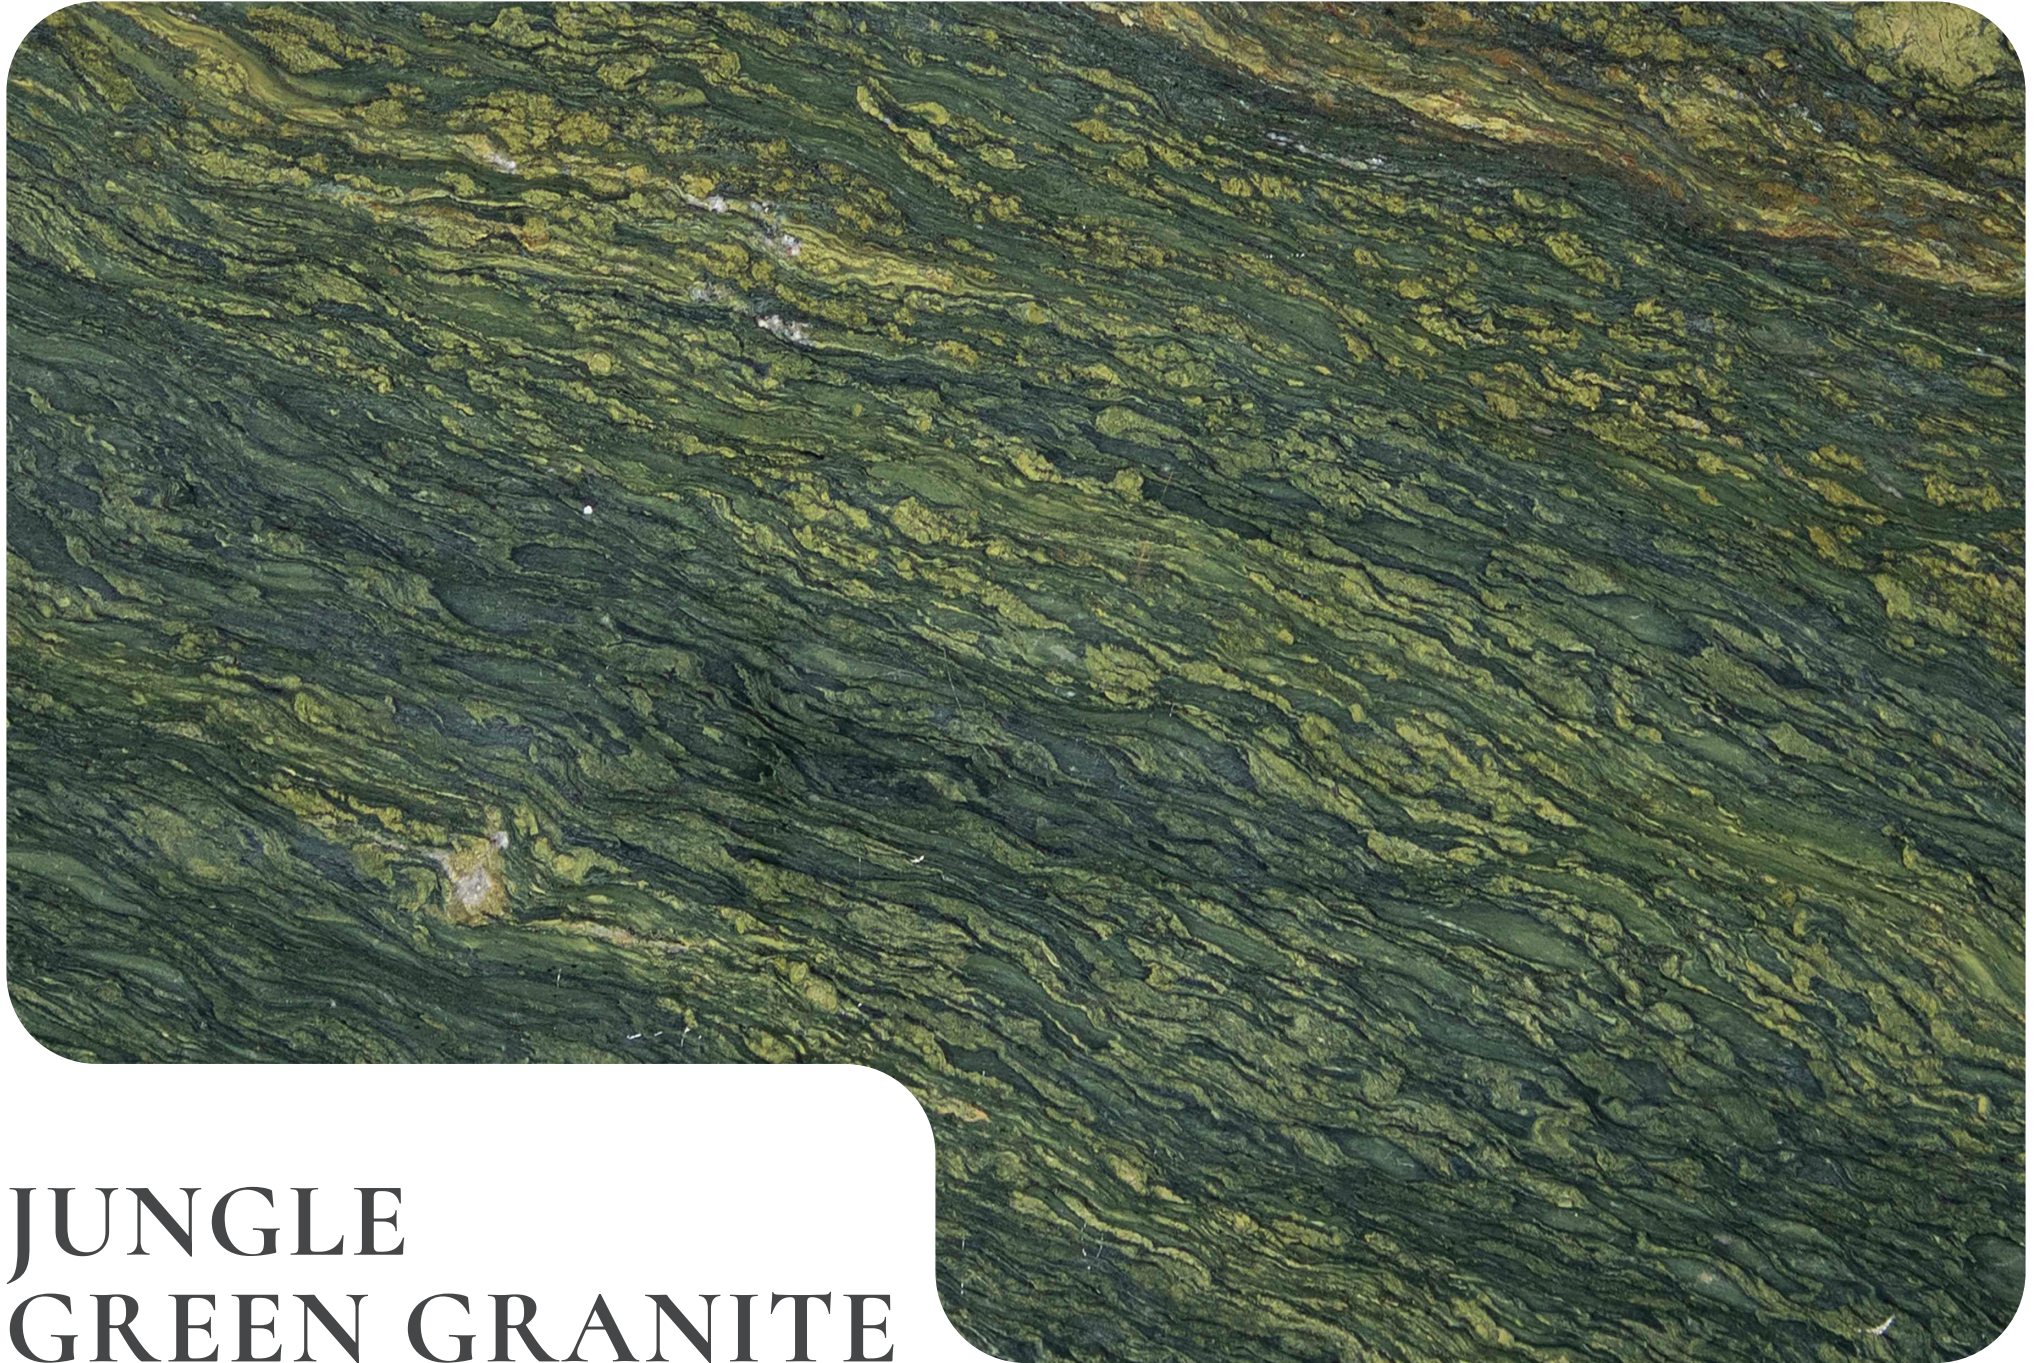

Combining robust physical properties with precision craftsmanship, ISMARCO granite products provide architects and designers with a reliable and versatile material, delivering strong performance in high-traffic environments while maintaining timeless natural beauty across both interior and selected exterior applications.

Onyx, The Radiant Spirit of Pure Luxury

ISMARCO onyx products are crafted from carefully selected premium-grade blocks, ensuring exceptional clarity, rich color depth, and striking natural translucency. The superior quality of these stones makes them an ideal choice for luxurious and high-end interior environments where visual impact is essential.

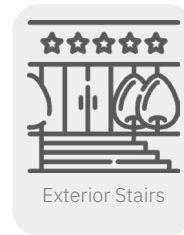

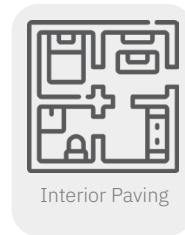

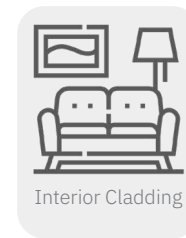

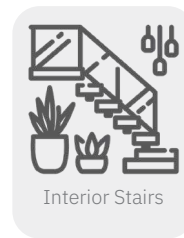

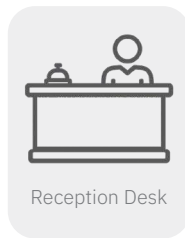

Onyx is highly valued for its unique veining, crystalline structure, and the ability to transmit light, creating dramatic effects in contemporary and modern designs. It performs exceptionally well in applications such as TV walls, luxury lobbies, feature walls, reception areas, vanities, and decorative interior elements, where elegance and artistic expression are the primary focus.

With its rare beauty and refined character, ISMARCO onyx elevates interior spaces by adding a sense of sophistication and exclusivity, making it a preferred selection for premium residential and commercial projects.
